GIVES THE GLUE SPREADING QUALITY YOU EXPECT AT A PRICE YOU DON'T

**ROSENQUIST, INC.**

P. O. Box 2064 Old Hwy. 421 West North Wilkesboro, NC 28659  
(919) 667-1987

Telex: 574 318 (ROSENQUIS NWIL)

This spreader provides an accurate application of most popular adhesives for the smaller production requirements such as cabinet doors, butcher blocks, table tops, panel gluing, lumber banding or any other edge that is flat and requires a precision spread of glue.

- Applicator Roll: 10" long by 5" diameter aluminum roll is grooved with 16 grooves per inch (rubber covered roll optional).
- Applicator roll revolves at 67.5 RPM for the easiest and most efficient application of PVA and Urea type glues.
- The amount of glue spread is adjustable by simply adjusting the wiper plate to apply the amount desired.

- Direction of Operation: The direction of spread may be reversed by simply removing the wiper plate and placing it on the opposite side of the roll. The

motor can then be electrically reversed to complete the transition.

- Power Requirement: 110 volt; 1.7 amp; single phase power. Comes equipped with a standard, grounded wall plug.
- Overall base size is 16½" wide by 24" long.

**CLEANUP:** Cleanup is made easy by lifting up on the glue pan which detaches the pan and roll from the motor and base. The roll will then allow itself to be lifted from the pan for final cleaning. Pan and roll may be completely submerged in water as stainless steel and aluminum are used exclusively.

ROSENQUIST ALSO MANUFACTURES A COMPLETE LINE OF HIGH PRODUCTION CONVEYORIZED SPREADERS AND GLUING PRESSES.
